According to our (Global Info Research) latest study, the global Electrical Epoxy Compound market size was valued at US\$ 377 million in 2025 and is forecast to a readjusted size of US\$ 509 million by 2032 with a CAGR of 4.4% during review period.

Electrical epoxy compound refers to a type of thermosetting insulating material specifically used in the electrical industry, formulated with epoxy resin as a base and incorporating various additives such as curing agents, fillers, toughening agents, and accelerators. Before use, it is in a liquid or flowable paste state. It is filled around electrical components or into molds through processes such as casting, potting, or injection. After curing, it forms a solid, dense insulator with excellent electrical insulation, thermal conductivity, and mechanical support.

In simple terms, it is a specialized epoxy resin 'formulation' used to manufacture or protect the core insulating components of high-voltage electrical equipment (such as transformers, instrument transformers, insulators, switches, etc.).
