An Electrical Power Factor Corrector (PFC) is a device or circuit that improves the power factor in electrical systems, making them more efficient. Power factor is a measure of how effectively electrical power is being used; it ranges from 0 to 1, with a higher power factor indicating more efficient power usage. Poor power factor usually occurs due to inductive loads like motors, transformers, and fluorescent lighting, which cause a phase difference between voltage and current, leading to wasted energy and increased load on the electrical system.
