Electrical Safety Insulated Gloves are protective gloves specially designed to protect personnel when performing electrical work in high voltage environments. These gloves are often made of special insulating material to prevent electrical current from entering the body through the hands, thus protecting workers from electric shock and other power-related injuries. The main function of Electrical Safety Insulated Gloves is to provide an insulation layer to prevent the conduction of electric current on the surface and inside of the glove. These gloves usually comply with standards such as the International Electrotechnical Commission (IEC) or the National Electrical Code (NEC), and are divided into different insulation levels based on their withstand voltage levels and usage scenarios.
