## Abstracts

According to our (Global Info Research) latest study, the global Electrical Servo Systems market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Electrical servo systems can be further divided into DC servo systems and AC servo systems. DC servo motors enable precise and fast starting or stopping functions due to their low armature inductive reactance. They are mostly used on equipment that can be controlled by a microcontroller or computer. AC servo motors contain encoders, which together with the controller provide closed-loop control and feedback. Generally, AC servo motors have a more advanced design and are equipped with better bearings. The AC servo motor has a higher operating voltage, so the torque is larger and the precision is higher. AC servo motors are mainly used in robots, automation equipment and CNC and other mechanical equipment.
