## Abstracts

According to our (Global Info Research) latest study, the global Electrical Substations Testing, Engineering and Maintenance Services market size was valued at USD 3220.6 million in 2023 and is forecast to a readjusted size of USD 4315.2 million by 2030 with a CAGR of 4.3% during review period.

This report focus on Electrical Substations Testing, Engineering and Maintenance Services market. A substation is a part of an electrical generation, transmission, and distribution system. Substations transform voltage from high to low, or the reverse, or perform any of several other important functions. Between the generating station and consumer, electric power may flow through several substations at different voltage levels. A substation may include transformers to change voltage levels between high transmission voltages and lower distribution voltages, or at the interconnection of two different transmission voltages.

According to the National Bureau of Statistics, in 2022, China's power generation was 8.8 trillion kWh, with a year-on-year increase of 3.7%. And the top three power generation methods were thermal power, hydropower and wind power. The per capita electricity consumption of residents was 947 kWh. In 2022, China's installed power generation capacity were about 2.56 billion kilowatts, with a year-on-year increase of 7.8%. The utilization hours of power generation equipment in power plants of 6,000 kilowatts and above in the country were 3,687 hours, with a decrease of 125 hours over the same period of the previous year. The investment in power supply engineering construction of major power generation enterprises reached 720.8 billion yuan, with a year-on-year increase of 22.8%. The investment in power grid engineering construction reached 501.2 billion yuan, with a year-on-year increase of 2.0%. According to data

released by the International Energy Agency, the global economy gradually recovered in 2022. With the influence of the rising energy prices, the global electricity demand in 2022 was 26,776 billion kWh, which increased 1.9% year-on-year. The generating capacity was 28,642 billion kWh, with the increase of 1.8% year-on-year. Among them, the United States generated 42.4 billion kWh of electricity in 2022, and Japan's total electricity consumption was 989.2 billion kWh, with the 7782 kWh per capita.
