According to our (Global Info Research) latest study, the global Electrical Surge Protector market size was valued at US\$ 309 million in 2025 and is forecast to a readjusted size of US\$ 433 million by 2032 with a CAGR of 5.0% during review period.

Electrical Surge Protectors are designed to protect against transient surge conditions. Large single surge events, such as lightning, can reach hundreds of thousands of volts and can cause immediate or intermittent equipment failure. However, lightning and utility power anomalies only account for 20% of transient surges. The remaining 80% of surge activity is produced internally. Although these surges may be smaller in magnitude, they occur more frequently and with continuous exposure can degrade sensitive electronic equipment within the facility.
