Abstracts

The global Electrically Beating Rotor Shaft market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The electrically beating rotor shaft refers to the component in the electric motor where the rotor shaft is subjected to electromagnetic force and produces rotational motion. When an electric current passes through the coil of the motor, the magnetic field generated will produce a torque on the permanent magnet or the induced current on the rotor shaft, thereby causing the rotor shaft to rotate. This rotational motion of the rotor shaft can be used to drive mechanical equipment or generate power.
