Electrically Controlled Exit Systems are security solutions designed to manage and control the safe and efficient exit of individuals from a building or secure area, typically in emergency situations. These systems use electronic components, such as sensors, locks, and control panels, to ensure that exit doors can be securely locked under normal conditions but automatically or remotely unlocked when needed, such as in the event of an emergency or authorized access. These systems are often integrated with fire alarm systems, access control systems, and other building safety technologies to provide both security and life safety, ensuring smooth, controlled egress while preventing unauthorized entry.
