According to our (Global Info Research) latest study, the global Electrically Operated Cast Steel Control Valve market size was valued at US\$ 149 million in 2025 and is forecast to a readjusted size of US\$ 208 million by 2032 with a CAGR of 3.2% during review period.

In 2025, the global production of electrically operated cast steel control valves reached 457,800 units, with an average selling price of US\$317.25 per unit. The global annual production capacity of electrically operated cast steel control valves is approximately 750,000 units, with a gross profit margin of approximately 23.2%. Electrically operated cast steel control valves combine cast steel valve bodies, valve cores/discs, and other valve components with an electric actuator. They are used to achieve automated and continuous regulation of parameters such as flow rate, pressure, and temperature in pipeline systems. They possess remote control, closed-loop regulation, and process monitoring capabilities and are widely used in chemical, energy, metallurgical, HVAC, and water treatment applications requiring precise flow control. The upstream of the electrically operated cast steel control valve industry chain includes cast steel/alloy steel materials, welding materials, valve bodies, and electric actuators; the midstream consists of electrically operated cast steel control valve manufacturers; and the downstream mainly uses them in petrochemical, HVAC, and industrial applications.
