According to our (Global Info Research) latest study, the global Electrified Shelf Systems market size was valued at US\$ 1052 million in 2025 and is forecast to a readjusted size of US\$ 1538 million by 2032 with a CAGR of 5.9% during review period.

Electrified Shelf Systems are integrated shelving solutions combining power supply, intelligent control, and communication, widely used in retail, warehousing, and logistics industries. This system provides continuous power and data connectivity to electronic shelf labels (ESLs), digital advertising screens, sensors, cameras, lighting, RFID readers, and other devices by embedding low-voltage power rails, power modules, and data interfaces within the shelving. The system typically supports modular installation, plug-and-play functionality, remote control, and centralized management. Traditional shelving cannot power intelligent devices, leading to complex wiring, difficult maintenance, and limited functionality. Electrified Shelf Systems, through a unified power supply and communication platform, significantly simplify wiring, improve equipment stability, and support intelligent operation, making them a key infrastructure for realizing smart retail and smart warehousing. The average price of this product is approximately \$300 per unit, with global sales of approximately 3.4 million units.
