## Abstracts

The global Electrified Transmission market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An electrified transmission is a type of transmission that combines an electric motor with a traditional internal combustion engine to provide power to the wheels. This hybrid system can improve fuel efficiency and reduce emissions compared to a conventional transmission, as the electric motor can provide additional power during acceleration and take over at low speeds, allowing the combustion engine to run more efficiently.

This report studies the global Electrified Transmission production, demand, key manufacturers, and key regions.
