The global Electro Deionization Water Filtration System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electrodeionization (EDI) water filtration systems, also known as continuous electrodeionization (CEDI) systems, are advanced and highly efficient technology used for purifying water by removing ions and impurities. EDI systems are widely employed in various industries, including pharmaceuticals, electronics manufacturing, power generation, and the production of ultrapure water for laboratory and research purposes. These systems utilize a combination of ion-exchange resins and an electrical process to deionize water, producing high-purity, ultrapure water without the need for chemical regeneration.

EDI systems use ion-exchange resins, similar to those used in traditional ion-exchange processes, to remove ions from water. Positively charged ions (cations) and negatively charged ions (anions) are exchanged with hydrogen (H⁺) and hydroxyl (OH⁻) ions, respectively. During the electrochemical process, ions migrate through the stack and are continuously removed from the feedwater. Cations move towards the cathode (negatively charged electrode), and anions move towards the anode (positively charged electrode). As ions migrate through the stack, the water becomes progressively deionized, resulting in high-purity and ultrapure water output. Unlike traditional ion-exchange processes, EDI systems do not require chemical regeneration, which reduces the need for handling and disposal of chemicals and makes the process more environmentally friendly.

EDI water filtration systems are widely used in industries where water quality and purity

are critical, such as in power plants, microelectronics manufacturing, and pharmaceutical production. They are especially valuable for applications requiring consistent and reliable sources of high-purity water, and they offer a more sustainable and cost-effective alternative to traditional deionization methods.
