Electro Drum Magnet is a device that uses electromagnetic force to separate metal impurities from materials. It is widely used in waste treatment, mineral processing and industrial production. It generates a strong magnetic field through the rotating drum to absorb and separate ferromagnetic materials from non-magnetic materials, and removes the absorbed metal impurities through the rotation of the drum. Electro Drum Magnets have become a key tool in the heavy industry and environmental protection industry due to their efficient separation capabilities, adaptability to large-scale material processing and easy-to-maintain design.
