Abstracts

The global Electro Galvanized Steel market size is expected to reach \$ 5044 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

In 2024, global electro galvanized steel production reached 5255.3 Kilotons approximately , with an average global market price of around US\$ 782 per ton.

Electro galvanizing, commonly known as cold galvanizing, uses an electrochemical method. The zinc ingot is used as the anode. The zinc atoms lose electrons and become ions that dissolve into the electrolyte, while the steel strip is used as the cathode. The zinc ions gain electrons on the steel strip and are reduced to zinc atoms that are deposited on the surface of the steel strip to form a coating.

1. Upgrading Downstream Demand

Automotive Lightweighting: Demand for thin, high-formability electroplated zinc for new energy vehicle bodies and interiors is rapidly growing.

Smart Home Appliances: High-end home appliances are placing higher demands on panel aesthetics, corrosion resistance, and paintability.

Architectural Decoration: High-end residential and public spaces are raising the standards for the appearance and environmental protection of purlins, partitions, and electromechanical brackets.

2. Policy and Standard Implementation

The national 'carbon peak and carbon neutrality' goals are prompting steel companies to accelerate decarbonization technology transformation and upgrade to high-efficiency,

energy-saving production lines. Continuous improvement in industry standards (such as stricter coating uniformity, adhesion, and environmental indicators) is driving technological iteration.

3. Technological Advancement and Investment Renewal

Technologies such as continuous online intelligent electrolytic cells, online coating thickness measurement, and precise current control are being applied. Automatic slitting, automatic leveling, and supporting deep processing equipment are improving response speed and product diversity.
