According to our (Global Info Research) latest study, the global Electro-Hydraulic Servo Bending Machine market size was valued at US\$ 475 million in 2024 and is forecast to a readjusted size of USD 781 million by 2031 with a CAGR of 7.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The electro-hydraulic servo bending machine is an advanced CNC equipment that uses electro-hydraulic servo synchronous control technology to achieve high-precision sheet bending. It mainly controls the hydraulic system through a servo motor, and the cylinders on both sides achieve synchronous movement under the regulation of a closed-loop feedback system, so that the slider maintains precise position control throughout the bending process. Compared with traditional torsion axis bending machines, it has higher synchronization and repeatability. The equipment is usually equipped with an advanced CNC system that supports multi-axis control, automatic compensation, graphical programming and other functions, and the automation system can be expanded according to actual processing needs. Due to its energy saving, stability and high level of intelligence, the electro-hydraulic servo bending machine has become an important equipment for the modern sheet metal industry to achieve flexible production and improve manufacturing quality.
