Abstracts

According to our (Global Info Research) latest study, the global Electro-Mechanical Brake (EMB) System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

An Electro-Mechanical Brake (EMB) system is an advanced braking system that uses electric motors and sensors to apply the brake force. Unlike traditional hydraulic brake systems that use pressure to apply the brakes, EMB systems use electric signals sent from the brake pedal to the brake actuator to engage the brakes. In an EMB system, the electric motor acts directly on the brake discs or drums, using a transmission mechanism such as a screw or gear to generate the necessary force to apply the brakes.
