## Abstracts

The global Electro-Optics Systems in Naval market size is expected to reach \$ 11890 million by 2029, rising at a market growth of 4.2% CAGR during the forecast period (2023-2029).

In the global electro-optics in naval market, the defense segment is likely to register a higher CAGR during the forecast period. Defense end users in countries such as Israel, the US, Russia, and Australia are increasingly adopting electro-optic systems for surveillance, detection, and identification, as well as weapon and other systems' director. One of the major factors driving the growth of the defense segment is the growing military expenditure for developing next-generation naval vessels, wherein unmanned systems are one of the trending technologies being adopted for naval operations. Also, during the forecast period, the growing number of older-generation naval vessels is another major factor likely to generate new opportunities for electro-optics in naval market players for defense segment during the forecast period. In addition, the rising electrification and growing adoption of electronic systems for naval vessels are among the other major factors driving the electro-optics in naval market growth for the defense segment.

The naval electro-optics systems consist of multi-sensor imaging modules catering to the needs for surveillance, monitoring, fire control, and panoramic search-and-track. In addition, the electro-optic enables the detection of all airborne and surface threats, both symmetrical and asymmetrical, regardless of the time of the day and weather conditions. Moreover, for high sea and coastal security operations, electro-optic systems provide surveillance, fire control, and air defense systems for several surface vessels, including aircraft carriers, frigates, corvettes, ocean and coastal patrol boats, and high-speed craft. Moreover, electro optic sensors are operational in various

airborne, ground, and naval applications, providing position and orientation data required for operation and target acquisition. Also, the sensors provide early-warning, abnormal activity monitoring, incident management, and comprehensive observation and reaction capabilities.
