Abstracts

The global Electro-permanent Magnetic Gripper market size is expected to reach \$ 107 million by 2032, rising at a market growth of 10.0% CAGR during the forecast period (2026-2032).

In 2025, global sales of Electro-permanent Magnetic Gripper reached approximately 30,000?38,000 units, with an average market price of about USD 1,400?1,800 unit, an annual production capacity of roughly 35,000?42,000 units, and an industry-average gross margin of approximately 35%.

Electro-permanent Magnetic Grippers are magnetic gripping devices designed for robots, manipulators, gantry systems, automated handling units and other end-of-arm tooling applications. They use an electro-permanent magnetic circuit that typically combines permanent magnetic materials, reversible magnetic elements, excitation coils, magnetic pole structures, control electronics, sensors and robot mounting interfaces. A short electrical pulse is used to switch the magnetic field on or off, while the holding force is maintained primarily by permanent magnets during the gripping phase. This enables low energy consumption, fail-safe holding during power loss, fast pick-and-release cycles and compact integration into robotic automation. The product scope mainly covers compact standard EPM grippers, intelligent magnetic grippers with integrated electronics and feedback, heavy-duty customized EPM end-of-arm tools, multi-pole magnetic arrays for gantry robots, and small solid-state EPM modules for robotics, drones and mobile platforms. Typical applications include handling, loading, unloading, sorting, positioning, palletizing and transferring ferromagnetic sheets, blanks, profiles, tubes, machined parts, welded components and steel structures in automated manufacturing environments.
