## Abstracts

According to our (Global Info Research) latest study, the global Electro-Static Discharge Coating market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Electro-Static Discharge (ESD) Coating is a specialized type of protective coating that is applied to surfaces to prevent the buildup of static electricity and safely dissipate any electrostatic charges. This is crucial in industries where static discharge can damage sensitive electronic components, ignite flammable substances, or disrupt precision equipment.

Powder coatings lack solvents, giving way to negligible volatile organic compound (VOC) emission into the atmosphere and reducing the risk of combustion during their usage and storage process. In addition, the powder can be easily washed when exposed to human skin, which reduces the risk of health problems for operators. ETFE is excellent in processability and able to form a thick and non-stick film layer with electrical, mechanical and chemical strength. FEP and PFA Coating Powder are low in melt viscosity and excellent in melt fluidity which can give a coating free of pinholes.
