According to our (Global Info Research) latest study, the global Electro-static Dissipative PBI market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Electro-static Dissipative PBI (polybenzimidazole) is a specialized variant of PBI that has been engineered to possess electro-static dissipative properties. PBI itself is known for its exceptional thermal and chemical resistance, but when modified to be electro-static dissipative, it becomes suitable for applications where controlling static electricity is critical. In many industries, the accumulation of static electricity can pose significant risks such as damage to electronic components, explosions in flammable environments, or interference with sensitive equipment. Electro-static dissipative PBI helps mitigate these risks by providing a controlled path for static charge dissipation.
