The global Electro-static Dissipative PBI market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electro-static Dissipative PBI (polybenzimidazole) is a specialized variant of PBI that has been engineered to possess electro-static dissipative properties. PBI itself is known for its exceptional thermal and chemical resistance, but when modified to be electro-static dissipative, it becomes suitable for applications where controlling static electricity is critical. In many industries, the accumulation of static electricity can pose significant risks such as damage to electronic components, explosions in flammable environments, or interference with sensitive equipment. Electro-static dissipative PBI helps mitigate these risks by providing a controlled path for static charge dissipation.

This report studies the global Electro-static Dissipative PBI production, demand, key manufacturers, and key regions.
