## Abstracts

According to our (Global Info Research) latest study, the global Electrochemical Formaldehyde Sensor Module market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The electrochemical formaldehyde sensor module is a reliable module based on the electrochemical principle that specifically detects the formaldehyde content in the air. It is mainly composed of formaldehyde electrodes, reference electrodes, electrolytes and control circuits. The current or potential signal generated by the redox reaction on the electrode surface is then converted into a readable value. When formaldehyde in the air enters the sensor module, it will undergo a redox reaction with the electrode surface, resulting in electron transmission and ion diffusion, forming a current signal. The electrochemical formaldehyde sensor module has high precision, fast response and long service life.
