The global Electrochemical Generator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The electrochemical generator, also known as fuel cell, is a chemical device that directly converts the chemical energy of fuel into electrical energy. It converts the Gibbs free energy in the chemical energy of the fuel into electrical energy through electrochemical reactions. The electrochemical generator has the carnot cycle effect limitation and the high efficiency. The The electrochemical generator uses fuel and oxygen as raw materials, and has no mechanical transmission parts, so it emits very little harmful gas and has a long service life.
