According to our (Global Info Research) latest study, the global Electrochemical Ozone Detector market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The electrochemical ozone detector is composed of an electrochemical ozone sensor and a control head. Based on the electrochemical reaction, the detection of the ozone content is realized through the redox reaction between the electrode and the electrolyte. The main components of the electrochemical ozone detector include sensors, circuit boards, display screens and batteries. Its workflow includes steps such as electrode rest, timer start, sample gas replacement, waiting for calibration and data processing, etc., with fast response, high accuracy, and easy to use.
