According to our (Global Info Research) latest study, the global Electrocoagulation Equipments market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Electrocoagulation Equipment can use its strong electric field to make the charged emulsified oil particles directional migrate, neutralize the electric nuclei on the surface of the electrode plate, and realize destabilization polymerization. At the same time, the efficient flocculation groups produced by electrolysis can also destroy the oil droplets very well. The electric double layer structure realizes the effect of demulsification, and then a large number of microbubbles generated by the synergistic reaction are removed by air flotation after demulsification, and the removal rate can reach more than 90%.
