Abstracts

Electrocoating (or e-coating) is a finishing process technology used worldwide to achieve high-quality, low-cost finishes at a level of efficiency and environmental compliance no other finishing method approaches.

The process involves submerging metallic products in a charged paint bath and electrically depositing the paint onto the product. With this process, paint only adheres to the intended product. The coating thickness is generally dependent upon the voltage applied to the paint.

According to our (Global Info Research) latest study, the global Electrocoating Services market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
