According to our (Global Info Research) latest study, the global Electrode induced gas atomization (EIGA) Powder Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Electrode induced gas atomization (EIGA) Powder Equipment is a type of powder production technology that utilizes a gas atomization process to produce fine metal powders. In this process, a high voltage electrical discharge is used to break up a molten metal stream into small droplets. These droplets are then rapidly solidified by a high velocity gas stream, resulting in the formation of fine metal powders.

EIGA powder equipment is widely used in the production of metal powders for a variety of applications, including additive manufacturing, thermal spray coatings, and powder metallurgy. This technology offers several advantages over traditional powder production methods, including increased production efficiency, improved powder quality and consistency, and reduced environmental impact.
