## Abstracts

The global Electrode induced gas atomization (EIGA) Powder Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electrode induced gas atomization (EIGA) Powder Equipment is a type of powder production technology that utilizes a gas atomization process to produce fine metal powders. In this process, a high voltage electrical discharge is used to break up a molten metal stream into small droplets. These droplets are then rapidly solidified by a high velocity gas stream, resulting in the formation of fine metal powders.

EIGA powder equipment is widely used in the production of metal powders for a variety of applications, including additive manufacturing, thermal spray coatings, and powder metallurgy. This technology offers several advantages over traditional powder production methods, including increased production efficiency, improved powder quality and consistency, and reduced environmental impact.

This report studies the global Electrode induced gas atomization (EIGA) Powder Equipment production, demand, key manufacturers, and key regions.
