## Abstracts

According to our (Global Info Research) latest study, the global Electrode Steam Generator market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Electrode steam generators, also known as electric steam boilers, are devices that use electricity to generate steam. Unlike traditional fossil fuel-fired boilers, these generators operate by passing an electric current through a conductive fluid (often water) within a chamber. The electrical energy is converted into heat, which causes the water to boil and produce steam.
