According to our (Global Info Research) latest study, the global Electrode Type Varistor Arrester market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Electrode Type Varistor Arrester is a surge protection device used to protect electrical systems and equipment from voltage surges. It consists of metal-oxide varistor discs stacked together, with electrodes on top and bottom. Under normal operating conditions, the arrester acts as an open circuit due to its high resistance. However, when a voltage surge occurs, the resistance changes, and the electrodes provide a low-resistance path to divert excess current. The arrester clamps the voltage at a safe level, preventing damage to sensitive equipment. It is commonly used in power distribution systems, telecommunications networks, and electronic devices. Selecting the right varistor arrester with appropriate specifications is crucial for effective surge protection.
