## Abstracts

The global Electrode Type Varistor Arrester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electrode Type Varistor Arrester is a surge protection device used to protect electrical systems and equipment from voltage surges. It consists of metal-oxide varistor discs stacked together, with electrodes on top and bottom. Under normal operating conditions, the arrester acts as an open circuit due to its high resistance. However, when a voltage surge occurs, the resistance changes, and the electrodes provide a low-resistance path to divert excess current. The arrester clamps the voltage at a safe level, preventing damage to sensitive equipment. It is commonly used in power distribution systems, telecommunications networks, and electronic devices. Selecting the right varistor arrester with appropriate specifications is crucial for effective surge protection.

This report studies the global Electrode Type Varistor Arrester production, demand, key manufacturers, and key regions.
