According to our (Global Info Research) latest study, the global Electrodeposition Additives for Electrolytic Copper Foil market size was valued at US\$ 187 million in 2025 and is forecast to a readjusted size of US\$ 402 million by 2032 with a CAGR of 11.3% during review period.

In 2025, the global sales volume of electrodeposition additives for electrolytic copper foil is projected to be approximately 18,200 metric tons, with an average price of around \$10,000 per metric ton. These additives are specialized organic or inorganic chemicals introduced into copper sulfate-sulfuric acid electrolyte systems to control properties such as copper foil nucleation, grain size, leveling, tensile strength, elongation, surface roughness, warpage, and pinhole defects. They include brighteners/accelerators, suppressors/carriers, levelers/grain refiners, wetting agents/anti-pinhole agents, and blended replenishment additives. This category excludes general-purpose copper plating electrolytes and additives used for PCBs, semiconductor packaging, decorative copper plating, and similar applications. Upstream sectors primarily involve fine chemicals such as SPS/MPS/DPS, polyethers, gelatin/collagen, dyes, and surfactants; downstream sectors mainly include manufacturers of copper foil for lithium-ion batteries, electronic circuits, and ultra-thin carrier-supported applications, as well as next-generation battery current collectors.
