# **Abstracts**

The global Electrodeposition Coating Process market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electrodeposition coating process is a term for a broad range of industrial processes which includes electrocoating, cathodic electrodeposition, anodic electrodeposition, and electrophoretic coating, or electrophoretic painting. A characteristic feature of this process is that colloidal particles suspended in a liquid medium migrate under the influence of an electric field (electrophoresis) and are deposited onto an electrode. This process is useful for applying materials to any electrically conductive surface. Electrodeposition coating process can also be called electroplating, which is a process for producing a metal coating on a solid substrate through the reduction of cations of that metal by means of a direct electric current.

This report studies the global Electrodeposition Coating Process demand, key companies, and key regions.
