## Abstracts

According to our (Global Info Research) latest study, the global Electrohydrodynamic (EHD) Jet Printing System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The electrohydrodynamic inkjet printing system (EHD) is a high-resolution printing device that is completely different from the piezoelectric ceramic printer. Piezoelectric printers undergo a process of converting electrical energy into mechanical external force, while electrohydrodynamic inkjet directly acts on the electric field on the working medium. When the electric field is concentrated at the needle tip, its intensity is greatly increased, and droplets much smaller than the diameter of the needle tip can be ejected.
