## Abstracts

The global Electrohydrodynamic (EHD) Jet Printing System market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The electrohydrodynamic inkjet printing system (EHD) is a high-resolution printing device that is completely different from the piezoelectric ceramic printer. Piezoelectric printers undergo a process of converting electrical energy into mechanical external force, while electrohydrodynamic inkjet directly acts on the electric field on the working medium. When the electric field is concentrated at the needle tip, its intensity is greatly increased, and droplets much smaller than the diameter of the needle tip can be ejected.

This report studies the global Electrohydrodynamic (EHD) Jet Printing System production, demand, key manufacturers, and key regions.
