Abstracts

According to our (Global Info Research) latest study, the global Electrolyte Analyzers market size was valued at US\$ 616 million in 2024 and is forecast to a readjusted size of USD 764 million by 2031 with a CAGR of 3.2% during review period.

Electrolyte analyzers measure electrolyte levels in the human body to detect metabolic imbalances and measure renal and cardiac function. The electrolytes measured include sodium (Na+), potassium (K+), chloride (Cl-) and bicarbonate (HCO3- or CO2). Electrolyte analyzers are used in hospital and reference laboratories, and also point of care settings. Most electrolyte analyzers use blood plasma, serum, or urine samples; some analyzers can use whole blood (for faster turnaround time) and cerebrospinal fluid (CSF). Electrolytes are measured using ion selective electrodes (ISE) and colorimetric and photometric techniques. Most electrolyte analyzers are capable of high throughput ranging from 400 to 2400 tests per hour.

At present, there are many manufacturers of electrolyte analyzers, and the market competition is fierce. Since the products are high-tech and high-standard products, the industry entry barriers are relatively high.

Global key electrolyte analyzers manufacturers include Convergent Technologies, Meizhou Cornley Hi-Tech etc. The top 2 companies hold a share about 40%. Asia Pacific is the largest market, with a share about 40%, followed by North America and Europe with the share about 28% and 20%.

In terms of product type and technology, semi-automatic electrolyte analyzers account for 3/4 of the sales share. In terms of product market application, electrolyte analyzers

purchased by private hospitals around the world account for 65% of the total sales.

At present, the operation of electrolyte analyzers is becoming increasingly simple, reducing the amount of operation required by users when using them. The size of electrolyte analyzers is gradually decreasing due to the development of new sensors.
