According to our (Global Info Research) latest study, the global Electrolytic Cleaner market size was valued at US\$ 194 million in 2024 and is forecast to a readjusted size of USD 258 million by 2031 with a CAGR of 4.1% during review period.

An Electrolytic Cleaner is a chemical cleaning product designed to remove surface contaminants through the process of electrolysis; it consists of conductive ions that, when a voltage is applied, enable an electric current to pass through the solution, initiating oxidation-reduction reactions at the anode and cathode to effectively dissolve and eliminate stubborn residues such as oils, rust, and oxides. Its distinctive feature is the capability to deeply penetrate tiny pores and crevices, offering a robust dissolution and stripping action on various persistent contaminants while maintaining a gentle approach to the substrate material, minimizing the risk of corrosion. Typically environmentally friendly, efficient, and reusable, an Electrolytic Cleaner completes the cleaning process without generating harmful waste liquids, yet it necessitates precise control of current and temperature to ensure optimal cleaning results and operational safety.
