Electrolytic copper cathode plates are copper plates deposited from copper electrolytic cells through an electrolytic process and are widely used in the fields of metallurgy and electronics. Its main features include high purity, excellent conductivity, and corrosion resistance. Usually, in an electrolytic cell, the cathode plate is formed by dissolving the copper anode in the electrolyte and then depositing metallic copper on the cathode plate. The purity of this cathode copper is usually above 99.99%, so it is widely used in the fields of electronics and electricity that require high conductivity.
