## Abstracts

According to our (Global Info Research) latest study, the global Electrolytic Copper market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Electrolysis Copper refers to copper foil/sheet made by Electrolysis process.

The blister copper (99% copper content) is pre-made into a thick plate as the anode, pure copper is made into a thin sheet as the cathode, and a mixture of sulfuric acid and copper sulfate is used as the electrolyte. After energization, copper dissolves from the anode into copper ions (Cu) and moves to the cathode. After reaching the cathode, electrons are obtained and pure copper (also known as Cathode copper) is precipitated at the cathode.
