Electrolytic degreasing powder is a chemical agent that removes oil stains from the surface of workpieces through electrolysis. It is mainly composed of white alkaline mixed powder, which is highly efficient, low-foaming and environmentally friendly. Electrolytic degreasing powder does not contain phosphorus and heavy metals, does not produce irritating odor during use, and has low or no corrosion to metal surfaces. Electrolytic degreasing powder is particularly suitable for degreasing metals such as steel, copper and alloys. It is widely used in the degreasing process of manufacturing, transportation, storage and use of steel, copper and alloys. It can effectively remove grease and impurities on the surface of workpieces, improve the cleanliness of workpieces and the quality of subsequent treatment.
