## Abstracts

The global Electrolytic Rectifier Transformer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electrolytic rectifier transformer is a kind of power equipment used to electrolyze copper, zinc, aluminum and other metals. It is mainly used to convert voltage, rectify current and reduce voltage fluctuations. It is a special transformer with multiple functions such as voltage transformation, rectification, and filtering. The electrolytic rectifier transformer usually consists of a high-voltage side, a low-voltage side and a neutral point. The high-voltage side is connected to the AC power supply, the low-voltage side is connected to the electrolytic tank, and the neutral point is connected to the ground wire. During the electrolysis process, the electrolytic rectifier transformer can convert the high-voltage AC power supply into a low-voltage DC power supply suitable for the electrolyzer, and remove the pulsation in the current through the filter circuit to ensure the stability of the current. The main feature of the electrolytic rectifier transformer is that it can work under conditions of high current, high power, high efficiency and high reliability, and is suitable for large-scale electrolysis process production.

This report studies the global Electrolytic Rectifier Transformer production, demand, key manufacturers, and key regions.
