Abstracts

According to our (Global Info Research) latest study, the global Electrolyzer Sealants market size was valued at US\$ 346 million in 2025 and is forecast to a readjusted size of US\$ 602 million by 2032 with a CAGR of 8.2% during review period.

Electrolyzer sealants are sealing materials, gaskets, adhesives, and formed-in-place sealing compounds specifically engineered to prevent leakage of hydrogen, oxygen, and corrosive electrolytes at connection points between electrodes, diaphragms, bipolar plates, and cell frames in electrolyzer systems. In 2025, global electrolyzer sealants production reached approximately 30,558 ton, with an average global market price of around USD 11,000 per ton. A factory gross profit of USD 2,750 per ton with 25% gross margin. A single line full machine capacity production is around 300 ton per line per year. The upstream is dependent on elastomer, fluoropolymers and epoxy resins. The downstream demand is concentrated in chemical processing, energy storage and industrial manufacturing. Liquid sealant for automated assembly uses Polyurethane/silicone sealants due to its high chemical resistance and low H₂ permeation, automated production. China market is driven by strong stack manufacturing and alkaline electrolyzer activity.
