Abstracts

The global Electrolyzer Test Fixture market size is expected to reach \$ 52.59 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Electrolyzer test fixtures are mechanical clamping and fluid connection components used for single-cell or small-area testing of electrolyzers such as PEM, AEM, and alkaline water electrolysis. They typically consist of end plates, current collectors, flow field plates, sealing gaskets, fastening structures, inlet/outlet water/gas interfaces, and temperature or pressure interfaces. Their function is to fix membrane electrodes, catalyst coatings, diffusion layers, or diaphragm materials in laboratory testing, and to provide stable clamping force, sealing, conductive connections, and repeatable test boundary conditions. In 2025, global sales of electrolyzer test fixtures were approximately 5,500 Units, with an average selling price of approximately US\$6,500 per Unit, and an industry average gross profit margin of approximately 40%-55%.

This report studies the global Electrolyzer Test Fixture production, demand, key manufacturers, and key regions.
