According to our (Global Info Research) latest study, the global Electromagnetic Anticollision Telemeter market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The electromagnetic anticollision telemeter provides the emission of a highly directional electromagnetic field through the transmitter, thereby acquiring the distance to the adjacent overhead crane through the reflected signal from the adjacent overhead crane, thereby triggering the intervention of the deceleration and stop relay. The intervention threshold is measured in meters and can be preset digitally.

The measurement of the electromagnetic anticollision telemeter is based on the calculation of the return time of electromagnetic waves and is insensitive to dust in the air, meteorological phenomena, vibrations, and attenuation caused by electromagnetic waves and other interference, thus ensuring adequate response. It has a wide range of applications in the automotive and aerospace fields.
