According to our (Global Info Research) latest study, the global Electromagnetic Flow Proportional Valve market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Electromagnetic flow proportional valve is a kind of hydraulic valve that converts the input electrical signal into force or displacement in proportion, so as to continuously control parameters such as pressure and flow. Proportional valve is composed of DC proportional electromagnet and hydraulic valve. The hydraulic valve part is not much different from the general hydraulic valve, but the DC proportional electromagnet is different from the electromagnet used in the general solenoid valve. The displacement output and suction output proportional to the given current can be obtained by using the proportional electromagnet.
