In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Electromagnetic Overband Separator is a device that uses electromagnetic force to separate ferromagnetic impurities from material flow. It is widely used in waste treatment, mineral processing and industrial production lines. It uses a powerful electromagnet suspended above the conveyor belt to absorb ferromagnetic metals in the material while smoothly conveying non-magnetic materials. The equipment is equipped with an automatic cleaning device to continuously remove absorbed metal impurities, reduce manual intervention and improve efficiency.
