## Abstracts

According to our (Global Info Research) latest study, the global Electromagnetic Passive Buzzer market size was valued at US\$ 1581 million in 2025 and is forecast to a readjusted size of US\$ 2435 million by 2032 with a CAGR of 6.3% during review period.

In 2025, global sales of electromagnetic passive buzzers reached 12.8 billion units, with an average selling price of US\$0.12 per unit. An electromagnetic passive buzzer is an acoustic component that produces sound by using an external drive signal to generate a magnetic field in an electromagnetic coil, causing the diaphragm to vibrate. It does not contain its own oscillation circuit; instead, it requires a square wave signal from an MCU or driver chip to control the tone and rhythm. It features simple structure, low cost, low power consumption, and programmable sound output, and is widely used in home appliances, security alarms, medical equipment, automotive electronics, instruments, and consumer electronics products for alert tones, alarm sounds, and status feedback. Its upstream raw materials mainly include copper wire coils, permanent magnets, metal diaphragms, plastic housings, and pin terminals, with copper wire and magnetic materials being the primary upstream material consumption. Downstream supply relationships are with home appliance manufacturers, automotive electronics suppliers, security equipment manufacturers, and consumer electronics OEMs, with home appliances and security alarm equipment being the main downstream consumers. In 2025, the global total production capacity was approximately 15.5 billion units, with an average industry gross margin of approximately 19%. The future lies in ultra-thin and miniaturized designs, highly reliable automotive-grade products, and integration with smart device systems. Demand and business opportunities primarily stem from the increasing prevalence of smart homes, the rise of automotive electronic alert systems, and the widespread use of low-cost acoustic components in IoT terminals.

The electromagnetic passive buzzer market is a typical example of large-scale standardized electronic components, exhibiting a development pattern of 'large volume, low unit price, and steady growth.' From the demand side, the continued growth in smart home appliances, security alarms, instrumentation, automotive electronics, and IoT terminals brings stable incremental growth. In particular, low-cost acoustic warning components remain irreplaceable in smart homes and small electronic devices. Meanwhile, the increasing application of safety warning sounds, reversing alerts, and vehicle control systems in automotive electronics also creates growth opportunities for medium-to-high reliability products.

From the supply side, the industry entry barrier is relatively low, but large-scale production, automation, and cost control capabilities are key competitive factors. Market concentration is gradually shifting towards manufacturers with large-volume delivery capabilities.

In terms of technological trends, miniaturization, low power consumption, high sound pressure levels, and high-temperature resistant automotive-grade products are the upgrade directions. At the same time, some application scenarios are facing replacement pressure from piezoelectric buzzers and speaker modules. Regionally, Asia remains the main production and consumption center.

Overall, this market experiences moderate growth but stable demand, making it suitable for companies with economies of scale and cost efficiency as their core competitive advantages for long-term investment.
