Electromagnetic Release (Electromagnetic Door Stopper) is a positioning device for normally open fire doors. It uses electromagnetic principles to control the opening and closing of fire doors, so that fire doors are normally open to facilitate the passage and ventilation of personnel. In the event of a fire, it can automatically release the fire door and automatically close it under the action of a common door closer to ensure fire safety. The electromagnetic release (electromagnetic door stopper) is mainly composed of two parts: the electromagnet body (installed on the wall) and the suction plate (installed on the fire door leaf). It is safe and reliable, intelligently linked, and has stable power supply. It is widely used in normally open fire doors on fire evacuation passages in buildings.
