According to our (Global Info Research) latest study, the global Electromagnetic Release market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Electromagnetic release is a positioning device for normally open fire doors. It uses electromagnetic principles to control the opening and closing of fire doors, so that fire doors are usually kept open to facilitate the passage of personnel and ventilation. When a fire occurs, it can automatically release the fire door, so that it can be automatically closed under the action of ordinary door closers to ensure fire safety. The electromagnetic release is mainly composed of two parts: the electromagnet body (installed on the wall) and the suction plate (installed on the fire door leaf). It is safe and reliable, intelligently linked, and has stable power supply. It is widely used in normally open fire doors on fire evacuation passages in buildings.

This report is a detailed and comprehensive analysis for global Electromagnetic Release market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets.
