According to our (Global Info Research) latest study, the global Electromagnetic Residual Current Circuit Breaker market size was valued at US\$ 1478 million in 2024 and is forecast to a readjusted size of USD 2320 million by 2031 with a CAGR of 6.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Electromagnetic residual current operated circuit breaker is a safety device that uses electromagnetic mechanism to achieve leakage protection. It can quickly disconnect the power supply when detecting residual current exceeding the set value in the circuit (usually due to insulation damage or electric shock to the human body) to prevent electric shock accidents and electrical fires. It is widely used in residential, commercial and industrial power distribution systems. Compared with electronic circuit breakers, it has a simpler structure, strong interference resistance, and is insensitive to temperature changes. It is suitable for places with poor power grid environment or long-term stable operation.
